REACH COMPLIANT

Optimize your reverse camera with View-it.

View-it is a complementary app designed to work seamlessly with the rugged View-it video capture hardware.

View-it allows a reverse camera feed to be relayed direct to an in-vehicle computer, avoiding the need for separate display screens.

As soon as the vehicle is put in reverse the image from the reverse camera is instantly displayed on the screen.

When reverse is disengaged, the display reverts to its previous state, freeing up the screen for normal use.
